

ACTA MECHANICA

Vol. 100, 1993

Contents

Contributed Papers

- Batra, R. C., Zhang, X.-T.:** Analysis of shear bands in a dynamically loaded viscoplastic cylinder containing two rigid inclusions. 105–114
- Brevdo, L.:** On the linear stability of a compressible inviscid parallel shear flow. 195–203
- Chao, Y.-J., Sutton, M. A., Wu, R.:** Determination of the asymptotic crack tip fields for a crack perpendicular to an interface between elastic-plastic materials. 13–36
- Cohen, H., Dai, H.-H.:** Nonlinear axisymmetric waves in compressible hyperelastic rods: long finite amplitude waves. 223–239
- Dafalias, Y. F.:** On multiple spins and texture development. Case study: kinematic and orthotropic hardening. 171–194
- Hanna, S. N.:** Free-surface flow over a polygonal and smooth topography. 241–251
- Haupt, P.:** On the mathematical modelling of material behavior in continuum mechanics. 129–154
- Hutter, K., Siegel, M., Savage, S. B., Nohguchi, Y.:** Two-dimensional spreading of a granular avalanche down an inclined plane. Part I. Theory. 37–68
- Kolář, V.:** Characteristic measure of the departure from the eddy-viscosity model. 125–128
- Kumari, M., Nath, G., Pop, I.:** Non-Darcy mixed convection flow with thermal dispersion on a vertical cylinder in a saturated porous medium. 69–77
- Le, K. Ch., Stumpf, H.:** Constitutive equations for elastoplastic bodies at finite strain: thermodynamic implementation. 155–170
- Li, P., Zierep, J.:** Periodic transonic flow without and with condensation in a 2-D plane channel. 1–12
- Manganaro, N.:** Linearization of nonautonomous models describing fluid filled elastic tubes and nonlinear elastic rods with variable cross-section. 95–103
- Nellner, P.-Ch.:** What makes the difference between shock boundary-layer interaction on an airfoil and on a swept wing? 115–124
- Sansour, C., Bednarczyk, H.:** A study on rate-type constitutive equations and the existence of a free energy function. 205–221
- Valanis, K. C., Peters, J. F., Gill, J.:** Configurational entropy, non-associativity and uniqueness in granular media. 79–93
